

Closure and Gratitude

- GERG celebrates its 60th anniversary at a challenging time of energy paradigm shift – **the net zero carbon transition in the next 30 years.**
- We looked back on how GERG provided important insights enabling the industry to **identify** early and **adapt** to **past challenges** particularly at times of **transformation.**
- GERG has reorganized to focus on the **new challenges and opportunities the road to decarbonisation gives to the gas industry:** methane emissions management, biomethane, hydrogen. We are now completely aligned with the objectives of the EU Green Deal and Fit for 55.
- GERG shared the collaboratively **developed roadmaps on each of these 3 priorities.**

Closure and Gratitude

- Thank you to our keynote contributions for the rich external perspective!
- Many **ongoing projects'** overview outlined the picture of a vibrant, active R&D community, with its diverse membership creating value through **R&D**.
- We pledge to continue delivering R&D projects & results along the roadmap through **collaboration between GERG members, and with other associations**.
- Thanks to the **GERG members, partners and Secretariat team**
- **Full gratitude to David Salisbury & Isabelle Moretti, presidents over the last decade** who contributed to the event, and most importantly, to drive GERG!

What next?

- Use the roadmaps as tools to coordinate with members, partners and other associations
- Continue launching collaborative R&D projects (map opportunities for funding)
- Ensure the capabilities of our collaborative and skilled research community are recognised and utilised
- Deliver the needed R&D support to the industry, decision-makers and society as we face the transformation challenge
- Foster the research community and encourage new talent!

THANK YOU!

All information on the conference will be available at <https://www.gerg.eu/anniversary-conference/>.
